The app I want is: ColorConsole (Fujitsu) No download links available Prices: A \$0.99 fee for "Additional software: ColorConsole" B \$9.99 fee for "Additional software: ColorConsole" C \$19.99 fee for "Additional software: ColorConsole" I'm surprised there are so many ColorConsole fake clones, but since there is no price difference between any of the clones it's a bit confusing which to use. The control panel is a bit different between the genuine ColorConsole and the clones. In addition, some of the clones have useless and tedious features that don't really make the application more useful. On the other hand, some of the fake clones are using Windows Paint, which is also a clumsy program, and require a lot of work in order to simulate the look of ColorConsole. I can't recommend any of them, but you can try the genuine ColorConsole first to get a good feel for it before spending time investigating the clones. Hi, I'm a ColorConsole user and will give you my own recommendations: 1) Don't get fooled by fake ColorConsole clones. They do not have the same color scheme and appear to be from different versions. 2) When choosing a ColorConsole, be sure to get the latest version available on the website. The first one is version 7.8.1 and the latest is 9.5.1. The first one looks different from the other versions. If you want a look similar to the original ColorConsole, then use version 7.8.1. 3) If you're a beginner, then I'd suggest using the Free version and learning the ropes before moving on to the Trial version. 4) To avoid screwing up the program, don't open it with the program that created it.
