The history of AutoCAD Product Key dates back to the 1970s, when Gorman and Miller received a contract from Heinz Corporation to create a CAD system. The two programmers developed a prototype CAD system called TECHNOSCOPE, which was commercially released in 1981 as the Heinz Product Design System (Heinz PDS). Technology developed during the 1970s to build a product design system similar to the IBM CAD system used by the IBM Corporation prompted Gorman and Miller to develop a new product design system for the market they already knew. Heinz PDS was developed using a proprietary development environment called MAX. MAX used a fixed 3-D space for depicting the object being designed and a flat 2D space for displaying the 2D views of the object. The first version of AutoCAD, version 1.0, was released in November 1983. AutoCAD replaced MAX as the development environment for the new product design system. It used a 3D space for depicting the object being designed and a flat 2D space for displaying the 2D views. In June 1987, Autodesk bought Heinz PDS. Autodesk kept the 3D and flat 2D environments in AutoCAD, but replaced MAX with the Intuition User Interface (UI) developed for AutoCAD 2.0. The goal of AutoCAD is to help the user create, communicate, and manage concepts in a way that helps them collaborate better. AutoCAD offers:

- Interactive 2D drafting and drawing
- 3D modeling and animation
- Construction with object-based design
- Realistic visualization of the human body
- Programming with direct editing
- Dynamic updating
- Capability to develop portable applications on mobile devices and web browsers

While the application program is based on the object-oriented Autodesk Architecture (the technology that drives AutoCAD), the application program itself is comprised of many other elements including the API, dynamic runtime libraries, application programming interfaces (APIs), and services. Another element is the Autodesk 360° collaborative model, which supports the capability to automatically synchronize design and visualization information between teammates. This model allows users to share their work, comments, and annotations directly on drawings in a shared workspace. AutoCAD enables users to work efficiently and intelligently with others by providing the following essential capabilities:

- Creating and editing 2D and

Australia will also allow the return of same-sex marriage to the Northern Territory, the court ruled. With a 60% vote in favor of same-sex marriage in the national survey, the ruling was no surprise. However, the Northern Territory is a separate Australian territory and it has a large aboriginal population. Under the new law, in effect for couples wed in other states, individuals from different races and cultures are allowed to wed. It is believed to be the first national law of its kind. The nine judges on the High Court unanimously ruled that the states of New South Wales, Victoria and Tasmania did not have the constitutional power to ban same-sex marriage. The judges said they did not intend to enter into any debate about whether same-sex marriage should or should not be legalized, the court said. "No legal questions are involved," Chief Justice Robert French said in the ruling. "The only question before the court is whether New South Wales, Victoria and Tasmania have the power to ban same-sex marriage." The result was a win for same-sex marriage advocates.
