More specifically, the present invention relates to systems and methods for protecting digital rights. With the rapid increase in storage space on electronic devices, businesses and consumers are ever more concerned with protecting their intellectual property. Recently, consumers have been using portable electronic devices, such as, for example, mobile phones and personal digital assistants, to store sensitive information. Unfortunately, consumers may be unaware that the portable electronic device is capable of storing confidential information. For example, consumers may download a sensitive software program from the Internet to a mobile phone in order to avoid a monthly fee and to avoid having to manually erase data that is no longer useful. Unfortunately, as the size of storage is often limited, the available storage for storing sensitive information is also limited. As such, information that is downloaded to the portable electronic device may not be able to be stored completely on the portable electronic device, or may be stored such that unauthorized persons are able to access information on the portable electronic device.Re: Bogleheads.org is Hiring!
